

Criteria for the Classification of Wegener's Granulomatosis (WG)

- Nasal or oral inflammation: Development of painful or painless oral ulcers or purulent or bloody nasal discharge
- Abnormal chest radiograph: Chest radiograph showing the presence of nodules, fixed infiltrates, or cavities
- Urinary sediment: Microhematuria (>5 red blood cells per high power field) or red cell casts in urine sediment
- Granulomatous inflammation on biopsy: Histologic changes showing granulomatous inflammation within the wall of an artery or in the perivascular or extravascular area (artery or arteriole)

Classified as WG if at least two of four criteria are present
